Julien Glin

Applying for: End-of-study internship on software engineer (begin on March 2026)

France, Lyon | +33 602 649 353 | julien.glin@icloud.com | Portfolio | LinkedIn

Summary

Motivated French computer engineering student @EPITA, specialising in technologies for the industry of the future and passionate about racing and cars. Experienced in front-end and back-end development as well as technical project management. Looking for a paid end-of-studies internship or fixed-term contract as a Software Engineer, both lasting 26 weeks in IT, starting in March 2026. I would like to put my technical skills to good use and develop them further.

Education

EPITA — **Sept 2023 - June 2026**
Computer science — Master of Science (MSc), Diplôme d'ingénieur (French engineering degree, equivalent to MSc)

"Future industry" course (IOT • Big Data • AI • Industrial Engineering • Cybersecurity • Industrial networks and safety)

IUT de Valence — **Sept 2021 - June 2023**
Computer science — BUT (Bachelor universitaire de technologie)

Institut Notre Dame — **June 2021**
Science — Baccalauréat général

Experience

Elipce — **Sept 2024 - Jan 2025**
Intern Developer — Valence, France

- Technologies: React.js, Node.js, PostgreSQL, Docker, Git, C#, ASP .NET
- Mission 1 - Web test management platform :
  - Development of a **web-based test management platform**, allowing tests to be added, modified, shared and deleted, similar to the collaborative features of a Google Doc.
  - **Drafting of precise technical documents**, including functional specifications and test logs, ensuring smooth collaboration between developers and efficient deployment of 100% of planned functionalities.
- Mission 2 - Blacklisted card management system :
  - Development of a **blacklisted card visualization system** for Thessaloniki metro in C#, featuring web interface and **interoperability architecture** for future peripheral transport agencies integration.
  - **Conducted comprehensive project review** and provided strategic recommendations that led to **complete redesign of specifications** and **database schema optimization**.

Ing'Europ — **April 2023 - June 2023**
Intern Developer

- Creation of an automated backup system with Windev, meeting the need for rapid data recovery.
- Optimisation of a management tool developed in Windev and PHP, integrating responsive design functionalities into an existing web platform.

University projects

Exploratory Data Analysis (EDA) on Formula 1 (Pair project) — **April 2025**

- Formulation of initial questions on the correlation between starting position and final ranking, performance gaps between teams and the evolution of results over several seasons.
- Use of Python and the Altair library to generate **interactive visualisations**: correlation graphs, driver progress curves and performance heat maps by season.
- Synthesis of results in a dynamic visual report, highlighting significant trends and F1 success factors.

Tiny X (Group of 10) — **April 2025**

- Development of a **backend infrastructure** for a distributed micro-blogging platform, using Java (Quarkus) with a microservices architecture.
- Implementation of **inter-service communication** via Redis and integration of MongoDB, Neo4j and Elasticsearch according to the specific needs of each service.
- Deployment on a Kubernetes cluster with Kustomize, ensuring isolation of services and efficient management of data flows.
- As project manager, managing the organisation of the team, monitoring the progress of tasks and resolving technical problems.

Java, Maven, Quarkus, Kubernetes, Redis, MongoDB, Neo4j, Elasticsearch

PING (Group of 4) — **May 2024 - June 2024**

- Design of **an educational IDE** for the Paris 2024 Olympic Games, dedicated to former sportsmen and women who are retraining for a career in development.
- Use of the Scrum method with the scrum master as role model

React, TailwindCSS, GraphQL

42sh project (Group of 4) — **Dec 2023 - Jan 2024**

- Development of a POSIX-compliant **command interpreter** in C, with management of processes, redirections and pipes.
- Creation of rewritten system functions such as cd, export, alias, ensuring compatibility with the POSIX standard.

C, POSIX, Autoconf

Languages

France
Mother tongue

English
B2 (780 points on TOEIC)

German
Beginner A2

Skills

Programming languages
HTML, CSS, JavaScript / Typescript, Python, C, C++, C#, Java, SQL, ASM

Frameworks
React.js, Bootstrap, TailwindCSS, Django, FastAPI, .NET

Tools & DevOps
Scrum, Git, Docker, Kubernetes, Redis, ElasticSearch, MongoDB, Neo4j, CI/CD pipelines, Cloud (Proxmox), MLOps

Operating systems
Windows(10-11), Linux (Debian; Ubuntu; Fedora; NixOS), MacOS

Network & System
POSIX, Shell scripting, Network basics (TCP/IP; DNS; HTTP; Firewall)

Softwares
Office suites, Jet Brain collection, VSCode, VIM, Digital twin

Interests

Sport
Volley-ball, skiing

Automobile
Formula 1, Sport cars
